COYOTE VALLEY SPECIFIC PLAN DRAFT EIR

EIR COMMENTS

To be consistent with the California Environmental Quality Act (CEQA), comments or questions relating to the Coyote Valley Specific Plan Draft Environmental Impact Report (DEIR) should focus on the adequacy or accuracy of the information in the DEIR. Comments regarding the merits of the CVSP "project" should be submitted separately as general comments (A place for general comments has been designated on the back of this form.). Please submit your written comments on this card at this DEIR meeting, or to Jared Hart via the methods listed at the bottom of the page by 5:00 P.M. on June 29, 2007. (Note: Please write legibly. We will not be able to respond if we cannot read your comments.)

6/5/07

PLEASE USE THIS SPACE IF YOU HAVE COMMENTS ON THE ADEQUACY OR ACCURACY OF THE DEIR: Impacts affecting existing citizens of San Jose and other cities in the Santa Clara Valley would be so significant that I believe that the development plan should not go forward - and is inadequate.

1. In draught years, the additional water usage of thousands of residences and businesses would have significant adverse effects.
2. Additional electricity and gas usage, especially when peak electricity is used for air conditioning, etc., would have significant adverse effects, such as possible additional "brown-outs", as well as depletion of the total energy "pool".
3. Additional air pollution resulting from thousands of additional vehicles on the roads would have significant adverse effects regarding health.
4. Additional garbage and refuse generated by thousands of people would have to go "somewhere" - causing additional disposal problems.

Development is generally considered a positive step. I believe that as time goes on, existing citizens can be better served if we preserve open space and rural farmlands for future generations. Additional people means additional consumption, and there will be enough infill growth. Increased parklands are needed now - and even more in the future. A Coyote Valley Park would rival Golden Gate Park in San Francisco, and would be envied by all the large cities in our country.
